PROBAR KSA

Investment Memorandum

Establishment of a GFRP Manufacturing Facility

Kingdom of Saudi Arabia

1. EXECUTIVE SUMMARY

PROBAR KSA is a strategic industrial initiative to establish a **Glass Fiber Reinforced Polymer (GFRP) reinforcement manufacturing facility** in the Kingdom of Saudi Arabia. The project aims to localize advanced composite reinforcement technology and introduce a high-performance, corrosion-resistant alternative to conventional steel reinforcement within the rapidly expanding Saudi infrastructure market.

The initiative is fully aligned with **Vision 2030**, supporting industrial diversification, localization of advanced manufacturing, supply chain resilience, and sustainable infrastructure development.

The project leverages:

- Proven PROBAR technology
- Over 10 years of industrial experience
- Integrated production know-how
- Structured digital and commercial systems

The objective is to introduce a corrosion-resistant, lifecycle-optimized alternative to conventional steel reinforcement within a structurally expanding Saudi infrastructure market.

ROBAR KSA represents a forward-looking industrial investment built on proven technology and strong market fundamentals. By introducing corrosion-resistant, lifecycle-efficient GFRP reinforcement into a structurally growing Saudi construction market, the project aims to deliver long-term industrial value, operational scale, and strategic alignment with the Kingdom's economic transformation objectives.

Key Financial Highlights

(Stabilized Operations)

Metric	Value
Initial Investment	€4.09M
Annual Revenue	€9.60M
EBITDA	€2.66M
Net Profit	€2.29M
EBITDA Margin	28%
Net Margin	24%
ROI	56%
Payback Period	< 2 years
Workforce	160 employees
Production Lines	28
Local Raw Material Integration	50%

The project demonstrates strong capital efficiency, rapid payback, and scalable expansion potential.

2. STRATEGIC MARKET CONTEXT

Market Overview

The Saudi reinforcement steel market is one of the largest construction material segments in the GCC, currently valued at approximately **USD 5–6 billion annually**, with **7–8 million tons** of yearly consumption. The sector is structurally supported by long-term national development programs and is projected to grow at **6–10% annually**, reaching an estimated **USD 11–12 billion by 2030**.

This growth is not purely cyclical but driven by sustained government-backed infrastructure and industrial transformation initiatives.

Key Growth Drivers

Vision 2030 Infrastructure Transformation

Large-scale modernization of transport, utilities, energy, and public infrastructure is generating strong and consistent demand for reinforcement steel.

Mega Industrial & Logistics Projects

New industrial cities, economic zones, and logistics hubs require substantial structural steel volumes for factories, warehouses, and heavy facilities.

Urban Development Expansion

Population growth and urbanization are fueling residential, commercial, healthcare, education, and tourism construction projects across major regions.

Public Capital Expenditure

Government-led capital spending remains a primary demand driver, providing visibility and stability to the construction pipeline.

Strategic Opportunity

Assuming the Saudi reinforcement market size is approximately **€4.6–5.5 billion annually**, the equivalent revenue values would be:

- **1% market share ≈ €46–55 million annually**
- **3% market share ≈ €138–165 million annually**

This translates into meaningful revenue generation and industrial-scale operations.

Conclusion

The Saudi reinforcement steel market offers a combination of **large scale, structural growth, policy alignment, and long-term visibility**. With sustained infrastructure investment and industrial diversification under Vision 2030, the sector presents a compelling opportunity for strategic industrial entry and capital deployment.

3. TECHNOLOGY & COMPETITIVE POSITIONING

PROBAR GFRP is positioned as a high-performance, corrosion-resistant alternative to traditional steel reinforcement.

Comparison: Steel Reinforcement vs PROBAR GFRP

Criteria	Steel Reinforcement	PROBAR GFRP	Strategic Implication
 Tensile Strength	 400–600 MPa	>≥1000 MPa	 Higher tensile capacity
 Weight	 Heavy	~75% lighter	 Reduced logistics & easier installation
 Corrosion Resistance	 Vulnerable	Fully corrosion-resistant	 Extended structural durability
 Service Life	 30–50 years	75–100 years	 Longer asset lifespan
 Chemical	 Periodic repair required	Minimal in aggressive environments	 Lower lifecycle cost
 Chemical Resistance	 Limited	High	 Improved total cost of ownership
 Chemical Resistance	 Conductive	Non-conductive	 Improved total cost of ownership
 Electrical Conductivity	 Higher in corrosive zones	Optimized long-term	 Improved total cost of ownership
 Lifecycle Cost	 Higher in corrosive zones	Improved total cost of ownership	 Improved total cost of ownership
 Lifecycle Cost	 Higher in corrosive zones	Optimized long-term	 Improved total cost of ownership
 Lifecycle Cost	 Higher in corrosive zones	Optimized long-term	 Improved total cost of ownership
 Lifecycle Cost	 Higher in corrosive zones	Optimized long-term	 Improved total cost of ownership

Positioning Conclusion

PROBAR is not positioned as a universal replacement for steel, but as a targeted high-durability reinforcement solution for:

- Coastal infrastructure
- Industrial facilities
- Logistics platforms
- Maintenance-sensitive projects

This selective strategy protects margins and supports disciplined market penetration.

5. INDUSTRIAL CONFIGURATION

Advanced Production Infrastructure

The PROBAR KSA facility is designed as a high-efficiency, scalable composite manufacturing platform built on proven industrial architecture and process optimization expertise.

Installed Production Capacity:

- **18 ProBar production lines** (GFRP reinforcement bars)
- **10 ProMesh production lines** (GFRP mesh systems)
- **Total: 28 fully integrated production lines**

Each line is engineered using optimized pultrusion technology, precision resin control systems, and standardized quality calibration protocols to ensure consistent mechanical performance and dimensional accuracy.

Annual Production Capacity

- **ProBar:** 44.9 million linear meters
- **ProMesh:** 2.49 million square meters

Operations are structured under a **dual-shift production model**, allowing high asset utilization while maintaining operational flexibility. The system is designed with controlled ramp-up capability, enabling progressive capacity scaling aligned with market penetration and order visibility.

The industrial layout incorporates:

- Process flow optimization
- Preventive maintenance frameworks
- Real-time production monitoring
- Standardized quality assurance systems

This configuration ensures industrial resilience, scalability, and production consistency from day one.

6. OPERATING COST STRUCTURE

Energy Efficiency & Industrial Optimization

The facility operates under a controlled and optimized energy consumption model:

- **93,184 kWh per month**
- **€65,550 annually in electricity costs**

Energy usage is stabilized through process efficiency, calibrated heating cycles, and optimized curing systems—reducing waste and supporting cost predictability.

Flexible Industrial Footprint

- **4,000 sqm production facility**
- **€184,332 annually in lease costs**

The leasing model reflects a disciplined capital allocation strategy. Rather than overcommitting to fixed real estate investments, PROBAR KSA maintains operational flexibility, scalability, and financial agility.

This structure:

- Preserves capital for production expansion
- Enhances ROI performance
- Supports adaptive capacity planning
- Reduces long-term fixed asset exposure
- The cost base is engineered for industrial competitiveness while maintaining scalability potential.

7. HUMAN CAPITAL STRUCTURE

Skilled Workforce & Structured Governance

The operation is supported by a **total workforce of 160 employees**, structured to balance production efficiency with professional oversight.

Workforce Breakdown:

- **Production Staff:** 142
- **Administrative & Technical Staff:** 18

The production team is trained in specialized composite manufacturing processes, quality control protocols, and equipment calibration systems. Technical supervision ensures process discipline and product consistency.

Administrative and technical leadership oversee:

- Production continuity and shift coordination
- Quality assurance compliance
- Procurement and raw material governance
- Financial control and reporting
- Supply chain coordination

Knowledge-Driven Operations

PROBAR's industrial model integrates know-how transfer, structured, and performance-based monitoring systems. Continuous training and standardized operating procedures reduce operational risk and improve productivity.

The combination of experienced management, trained production teams, and structured oversight creates a stable, scalable, and professionally governed industrial environment.

Industrial Advantage

Together, the advanced production configuration, disciplined cost structure, and skilled human capital framework position PROBAR KSA as:

- A scalable composite manufacturing platform
- An innovation-driven industrial facility
- A cost-controlled and capital-efficient operation
- A professionally managed and execution-ready enterprise

This integrated structure ensures not only production capacity, but sustainable operational excellence and long-term industrial competitiveness within the Saudi market.

8. MANAGEMENT EXPERIENCE & EXECUTION CAPABILITY

The strength of **PROBAR KSA** is rooted in its experienced leadership and proven industrial execution model. The PROBAR team brings **over 10 years of direct, hands-on experience in GFRP manufacturing**, combining technical mastery, operational discipline, and structured commercial systems. This significantly reduces start-up risk and ensures a smooth and controlled industrial ramp-up in the Kingdom of Saudi Arabia.

Proven Industrial Expertise

The management team has extensive experience in designing, operating, and optimizing GFRP production facilities. Core competencies include:

- Production line design and performance optimization
- Advanced pultrusion process control
- Structured quality management systems aligned with international standards
- Preventive and predictive maintenance frameworks
- Operational efficiency and cost-control methodologies

This experience enables the Saudi facility to launch using validated production protocols rather than undergoing a lengthy trial-and-error phase. The result is faster stabilization, consistent product quality, and controlled operational performance from inception.

Engineering & Market Integration

Beyond manufacturing capability, PROBAR has strong technical integration experience within the construction ecosystem. The team actively supports:

- Civil engineering integration of GFRP solutions
- Technical advisory for consultants and EPC contractors
- Project-level design support and material validation
- Specification development and technical education

This capability is essential for accelerating GFRP adoption in infrastructure projects, ensuring engineers and contractors have confidence in performance, compliance, and lifecycle benefits.

Structured Digital Infrastructure

PROBAR operates with a modern digital backbone that strengthens both industrial and commercial execution:

- Proprietary CRM for structured market development
- AI-supported marketing tools
- Real-time production monitoring systems
- Data-driven operational management

This integration enhances transparency, scalability, and decision-making efficiency.

Execution Advantage

The combination of industrial experience, engineering credibility, and digital systems creates a strong competitive edge. It reduces commissioning risk, improves operational control, and supports rapid market penetration.

PROBAR KSA is therefore not a start-up experiment, but a **replicable, experience-backed industrial platform** positioned to deliver disciplined execution and sustainable growth within the Saudi infrastructure market.

9. FINANCIAL PERFORMANCE (STABILIZED OPERATIONS)

Upon reaching stabilized operations, PROBAR KSA demonstrates strong profitability and disciplined financial performance, reflecting the strength of its industrial model and cost structure.

Key Financial Indicators

- **Annual Revenue:** €9.60 million
- **EBITDA:** €2.66 million
- **Net Profit:** €2.29 million

This translates into robust operating margins and strong cash-generation capacity, positioning the company as a high-efficiency industrial platform within the advanced materials sector.

Profitability Drivers

The strength of the financial performance is not incidental—it is structurally supported by several core advantages:

1. Efficient Production Model

Optimized pultrusion processes, structured shift operations, and calibrated production lines ensure high output consistency with controlled waste levels and strong asset utilization.

2. Controlled Operating Expenses

Disciplined cost management across energy, labor, and facility overhead maintains operational efficiency while preserving scalability.

3. Local Sourcing Integration

Strategic integration of local raw materials and supply chains reduces logistics costs, mitigates currency exposure, and strengthens margin resilience.

4. Moderate Energy Intensity

Compared to traditional steel reinforcement manufacturing, GFRP production requires significantly lower energy input, contributing to cost stability and margin protection.

Financial Strength & Strategic Positioning

The combination of strong EBITDA generation and healthy net profitability provides:

- Internal reinvestment capacity
- Attractive return metrics
- Operational resilience
- Reduced dependency on external financing
- Scalability potential without disproportionate cost increases

At stabilization, PROBAR KSA operates as a lean, margin-efficient industrial platform capable of sustaining growth while maintaining disciplined financial performance.

10. POST-LAUNCH EXPANSION STRATEGY (FROM 2029)

Following stabilization (2026–2028), expansion may be activated from 2029.

Medium-Term Objective: 3% Market Share

Projected Saudi reinforcement market (5-year horizon): $\approx$ USD 6.5Bn

3% penetration €180M annual revenue

Estimated expansion CAPEX: €25–35M

Potential EBITDA at maturity: €45M

Indicative enterprise value (6x EBITDA): €270M

Expansion framed as disciplined, performance-based growth activation.

11. INVESTMENT COMMITTEE RECOMMENDATION

PROBAR KSA presents:

- Attractive risk-adjusted returns
- Strong structural market depth
- Direct alignment with Vision 2030
- Experienced management team
- Controlled capital exposure
- Clear scalability pathway

Subject to standard legal, financial, and operational due diligence, proceeding to implementation in 2026 is recommended, with structured monitoring for potential expansion from 2029.

European Technical Assessment ETA 24/0295 of 27/06/2024
